I Pressure Regulating Valves

Controlling pressure of liquids and gases in various industrial fields

Pressure Regulating Valves are designed for controlling pressure of liquids&gases in various industrial applications. We emphasize the phrase "complete control" because we firmly believe that we have been addressing many of the problems that others continue to ignore. Our technical innovation and investigations will continue to improve our products and services.

Performance

Directly operated / Pilot operated
Easy setup / Fast actupm
Low cost maintenance

Design Flexibility

Wide spring selection range
Various types of pressure regulating valves
for liquid and gases

Specification

Pressure reducing type (P2 control)
Back pressure / relief type (P1 control)
Tank blanketing type

Rich Experience

Based on long experienced Motoyama Inc.(since 1927), Japan

Single Responsibility

Wide range of products like Globe, V-ball, Butterfly, Ball, Pressure Regulating Valve, Tank Blanketing Valve, Tank Bottom Flush, Teflon Block Valves, Various Actuators, Diaphragm, Cylinder, Electric Special Materials, Alloy20, Hastelloy C, Monel, Duplex, etc are available

I Company Introduction

Company Name : Korea Motoyama Inc.

Korea Motoyama Inc. was founded in 1988 through the technology and capital investment by Japan Motoyama Inc., which has almost 90 years of history. With long experiences, KOMOTO continues to invest in research and development, testing facilities, and quality control systems. Today, we are ready to provide our customers with the best solutions to control special fluids under any conditions.
