I Color Contact Lens

Clear View Beautiful Eyes ICK contact lens

We have more than 3,000 trendy lenses that are each suitable for various different countries. These lenses can make your irises more natural and the shape of your eyes more clear.

Manufacturing Method **Innovative Material**

ICK ContactLens has researched and developed ICK-Polymacon as an innovative material to produce hydrophilic contact lenses that are less irritating our customers' eyes.

Double Coating Printing(DCP) Method

ICK Contact Lens manufactures safe contact lenses that do not put a strain on your eyes due to the double coating printing (DCP) method which prints pigments between lens materials, keeps the pigment from touching your eyeballs or being decolorized, and makes the surface of the lens even.

Soft Edge Design

ICK ContactLens designs contact lenses with TrueEyeEdge, which reduces the angle of the part contacting the eye to provide a comfortable fit at all times.

Color Chart

I Company Introduction

Company Name : ICK Co., Ltd

ICK ContactLens has been recognized as a leader in the global colored contact lenses market based on its own technology through continuous research and development.

ICK ContactLens patented the manufacture of UV protection and anti-bacterial contact lenses, and develops and produces colored contact lenses that make clear vision and create beautiful eyes.
