

Health

I OnychoClip

low pain, high efficiency

It is a medical device that treats the fundamental causes of ingrown nails.
After daily use, the toenail tissue is filled to the correct shape, leading the toenail to grow in the correct direction.
Through TERASISDNC's unique technique, OnychoClip reduces the deviation during the calibration period.
Moreover, compared with surgical treatment, OnychoClip is a noninvasive treatment, decreasing the possibility of secondary infection or recurrence of intrinsic and deforming toenails.
It is portable and convenient because of its small size.

Caution

1. After treatment, avoid wearing tight shoes or furry socks.
2. When OnychoClip has deviated, please visit a hospital or clinic to prevent infection.
3. After treatment, please attach the band according to the case.

I Company Introduction

Company Name : TERASISDNC CO., LTD

Terasis dnc for a comfortable and happy life
