I TurboSeal

Turbo Seal is the perfect and ideal comprehensive positive-waterproofing cold-applied material.

- 1. Turbo seal is a single component, synthetic rubber polymer gel-type comprehensive waterproofing solution. There is no need for solvents or chemicals, which are vulnerable to fire. Turbo Seal itself is perfect to apply.
- 2. Turbo Seal is both for pre-applied and post-applied waterproofing solutions. It is suitable for all types of concrete structures: new and repairing, above and below grade.
- 3. Turbo Seal is the world's first non-curing waterproofing material: flexible forever. It doesn't need a curing time. You don't need to waste days waiting for the curing time. Definitely cost effective!
- 4. Turbo Seal doesn't require the primer. The project time and cost saved a lot!
- 5. Viscosity is so remarkable that Turbo Seal can actively respond to the substrate movement. It adheres well to any foreign materials, and it even adheres in damp conditions. Turbo Seal also has the characteristics of self-healing, as it shows amazing crack-bridging ability!
- 6. Turbo Seal is environmentally responsible, certified by UL Ecologo. It is made of recycled rubber and has less than 0.002% of VOCs. Safe for installation!

*** You may need a pump machine to make Turbo Seal soft before using.

Product Info	
Size	20kg / Box
HS Code	3214.90
MOQ	48 ea
Price	Vary to each products
Features	Eco-friendly, cohesive, flexible
Material	Synthetic Rubber Polymer Gel

I Company Introduction

Company Name : Re-New System Co., Ltd

Renew System has created infinite value and has been delivering sustainable solutions with Turbo Seal since 1999. We proudly introduce our Turbo-Seal as the first and only product in the world that can comprehensively waterproof concrete structures permanently! We have accomplished many projects as Incheon International Airport in the Republic of Korea, MCE in Singapore, BART and Presidio Parkway in San Francisco, USA, and
