I Vuumpet Pet Dry Room  
For a better life with your pets

It is rapidly and comfortably dried through every corner of the animal's fur through a technically designed air flow path optimized for the dry position of the companion animal. The air used is a dedicated air circulation system for pets that can be reused to achieve the most efficient dry effect with minimal power consumption.

- 1) 15min Quick Dry When dry, the animal's posture is analyzed and designed to allow precise drying of all parts from the soles of the animal's feet to the belly and back.
- 2) Air Shower after walk After walk, do not shake waste materials and contaminants from the inside of the house. Use the 'Air Shower' as many as you want in a day.
- 3) Collection function for Hair A collection function that gathers the hair and dust that are blown during drying. Dry without worrying about the hair blowing into the house.

Product Information					
Model	Outer	Inner	Weight	Power	Color
