I Small Lab microneedle

ELDEEN Age Twenty one Micro Therapy Program

The current Microneedle Therapy Systems (MTSs) in the market are made with either steel or plastic. Apart from being invasive, it would take longer to regenerate the skin while using different ampoules to penetrate the skin. ELDEEN Age Twenty One Therapy Program is made with 250 μ m dissolving microneedles. The active ingredients from the microneedles penetrate the skin in a noninvasive way. These dissolving microneedles discharge the hyaluronic acid and triple peptide into the deep layers of your skin. The mounted roller on the microneedle surface helps the active ingredients in the microneedles penetrate the stratum corneum and pass through the epidermis as it is rolled on the skin. There are more than 3,000 soluble HA microneedles in the roller head with ingredients that effectively reduce wrinkles. The roller head can also be easily replaced after each use.

Product Info	
Components	8 Cartridges, 1 Handle, 1 Serum (30 ml)
HS Code	3304.99
Features	OEM/ODM enabled
Price	FOD USD 55 / per set
MOQ	100 set

I Company Introduction

Company Name : Small Lab Co., Ltd.

Small Lab Co., Ltd. develops an array of products by applying convergence technology from various areas, such as medicine and beauty, based on transdermal drug delivery system (TDDS) technology. As a microneedle development and manufacture specialist, Small Lab Co., Ltd. uses an automated clean room facility that is optimized for producing microneedles to meet the dynamic market demands.
