I Ultra High

Height Increasing Formula for Kids

Our product is made of oysters fermented with a patented method using specialized lactic acid bacteria. Unlike other height growth products designed to increase calcium absorption or enriched with height-enhancing nutrients, it is based on a natural ingredient: fermented oyster.

The enzymatic decomposition process increases the amount of nutrients absorbed by the human body, while lactic acid fermentation generates Gamma-aminobutyric acid (GABA). This substance boosts the effect of stimulating bone formation and alleviating osteoporosis by supplementing the various nutritional ingredients of oyster, including taurine, arginine, amino acid, essential minerals, which are also effective in anti-oxidation, fatigue recovery, and stress relief.

Fermented Oyster Extract

- Generates GABA that enhances height growth and fights osteoporosis through the oyster enzyme decomposition process
- Contains a large amount of amino acids and essential minerals
- Has antioxidant, fatigue recovery, and stress relief effects

Product Info

Size	1.5g tablet
Weight	500mg 120 capsules
Age of use	5~11
Validity	2 years from manufacture date

*Protective Effects of Fermented Oyster Extract against RANKL-Induced Osteoclastogenesis through Scavenging ROS Generation in RAW 264.7 Cells (Int. J. Mol. Sci. 2019, 20), <https://doi.org/doi:10.3390/ijms20061439>

*Fermented Oyster Extract Prevents Ovariectomy-Induced Bone Loss and Suppresses Osteoclastogenesis Nutrients 2019, 11(2019. 6.), <https://doi.org/10.3390/nu11061392>

*Fermented Oyster Extract Promotes Osteoblast Differentiation by Activating the Wnt β -Catenin Signaling Pathway, Leading to Bone Formation Biomolecules 2019, 9 (2019. 11.), <https://doi.org/10.3390/biom9110711>

*Effects and Safety of Oral Ingestion of Fermented Oyster Extract on Child Kidney Growth (International Journal of Environmental Research and Public Health, 2020, 11), <https://doi.org/10.3390/ijerph17238811>

I Company Introduction

Company Name : MarineBioprocess Co., Ltd

As a leading company in developing natural high functional new materials using marine biomaterials, we develop new natural materials and health functional foods through the Bio-Conversion/Fermentation technology. We are moving toward becoming the best seaweed fermentation company in the world. Thus, we have secured and commercialized the world's first seaweed lactic acid bacteria fermentation, GABA manufacturing technology.
