I High-Quality Portable Mixer

Compact, Lightweight, Low-Priced, High-Quality

A portable mixer is useful for small lot production with less than 200 liter volume tank. It is especially recommended for liquid- liquid mixing and liquid - solid mixing. C:a,p=-type mixers are ideal for smal lot production. These are compact and lightweight, low-priced, quality-enhanced, and maintenance free. They are also readily available.

Product Features One touch coupling allows the mixing shaft to easily be remove from the drive shaft, Light Weight. Small, Lowpower, Hight Efficiency, Angle-adjustable drive unit clamp, Oil-free drive

A610 Delievers maximum performance in applications where high shearing is required or powdery substances are forced into liquid for dissolution

A720 Mixing small and medium-volume liquids, ordinarysoluble liquids, liquids for dilution and heat transfer

A640 Best for mixing liquids of relatively viscous liquids or for mixing in which foaming must be avoided

A630 Could be operated at low speeds, operation can be safely performed while discharging the liquid from the tank

A720K Available with various values of rpm ranging from low rpm values to high rpm values

A760 Made of staines steel to protect the product from rust and paint. Ideal for fine chemical pharmaceutical and food precess

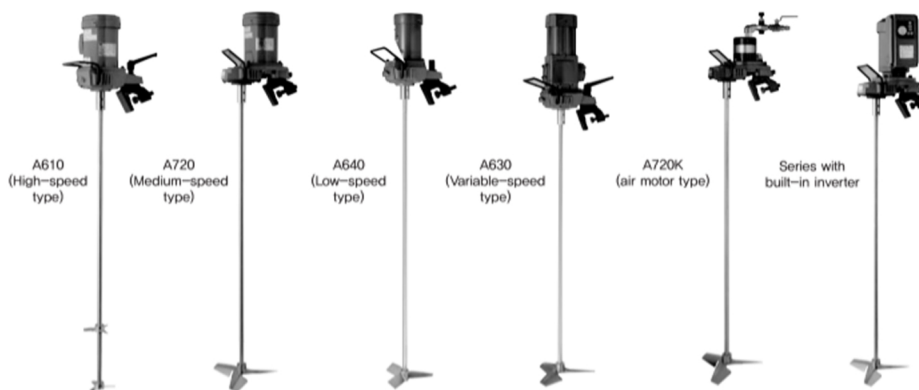

Series with built-in inverter The rotation speed can be easily and smoothly adjusted on the mixer body itself.

Portable Mixer Impeller

S15 Impeller (High-speed type) Generate a strong shearing force. The serration at the rear end of the blade generates a turbulent flow to break powder and fluid lumps.

P36 Impeller (Medium-speed type) Superior hydrofoil impeller having camber and rake angle at each blade controls and converges the circumferential flow into a high-speed axial flow

L18 Impeller (Low-speed type) Blades are finely twisted to control the direction of the discharge flow. Effective in operations with low liquid level or where a lard d/Dvalue is required

I Company Introduction

Company Name : HADO CO.,LTD.

HADO mixers are the leading products in the industrial fields of petrochemicals and chemicals, pulp and paper, water and waste water treatment, FGD, oil and petroleum, mining and minerals, pharmaceuticals, slurry storage, and many other fluid applications. HADO always make efforts to upgrade the reliability, functionality and safety of the mixers by using flow visualizing methods and advanced CAE methods.
