I Eco-friendly material

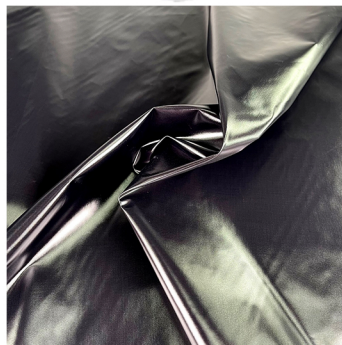

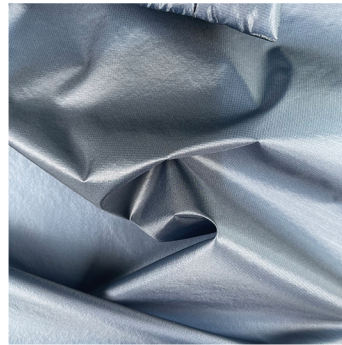

SILKYTEX Eco-friendly materials for performance apparel

PMD-210323 is a blend of recycled nylon and certified organic cotton.

The nylon used is made from nylon waste that has been recycled and can be converted into carbon gas during processing. Unlike conventional GM cotton, organic cotton produces seeds from which new plants can grow. This saves farmers enormous costs on new seeds. Furthermore, synthetic chemical fertilizers and pesticides are banned in organic farming. Farmers fight pests with traditional methods, thus protecting both the environment and their own health.

We recently developed 500D NYLON(66), 70D NYLON and 40D NYLON Completely BIODEGRADABLE in landfill. After the fabric reaches end of the authorized landfill around the world. It will take only 5years to fully BIODEGRADE.

Product Info	
Size (capacity)	Width 55/56
Material	Recycle NYLON Organic Cotton
Color	All
Style	High-End
Weight	70GR/SQM
HS Code	5210.11
MOQ	3,000 M

I Company Introduction

Company Name : KOREA SILKROAD CO., LTD.

Since our establishment in 1997, we have ceaselessly engaged in R&D, thanks to which we have been able to work and develop into a world-class top brand. We are a company that works with a proud vision of contributing to the culture of fashion. Based on customer trust and communication—values that we prioritize—we hope that together, we will be able to be happy and enjoy mutual growth at all times.
