## I Hyper-CX Electric Vehicle Motor/Transmission

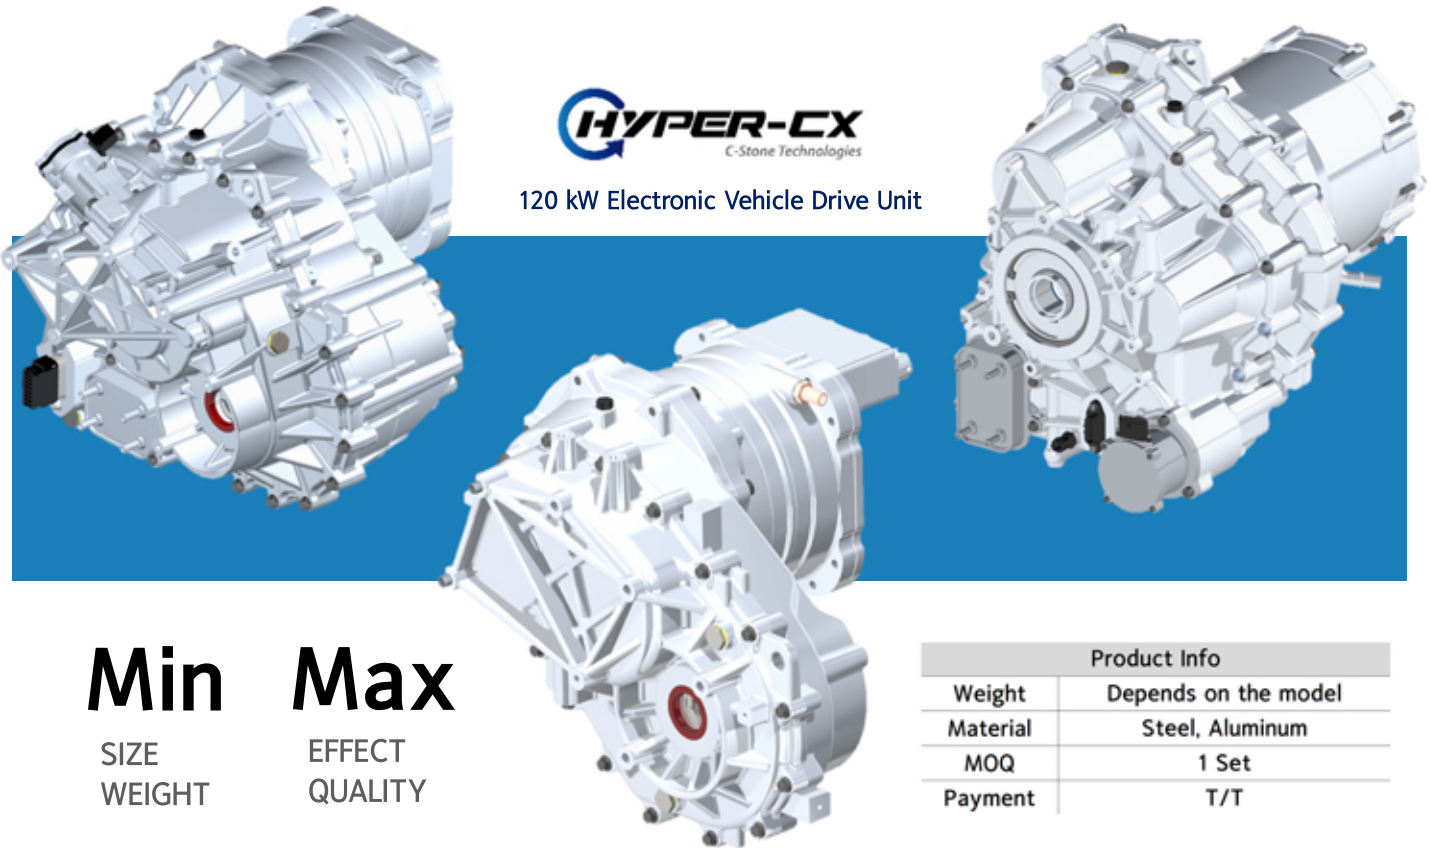

### Heart of the vehicle: Since 2008

C-Stone Technologies manufactures transmissions with **minimum weight** and size but **maximum efficiency**.

We are capable of designing single-speed and two-speed transmissions of the Co-Axial and Parallel types for various motor powers. We also have a wide range of experience in the clutch system.

As such, it is possible to develop a transmission that includes a **two-speed shifting mechanism**, **torque vectoring**, and **ELSD** devices with wet multi-plate clutches. In addition, we have various ideas for hydraulic control systems. Transmission with an EDD can be developed as needed.

120 kW Electronic Vehicle Drive Unit

**Min**      **Max**

WEIGHT      QUALITY

Product Info	
Weight	Depends on the model
Material	Steel, Aluminum
MOQ	1 Set
Payment	T/T

## I Company Introduction

### Company Name : C-Stone Technologies

For over a decade, we have accumulated great experience and knowledge in engineering consultancy, specializing in transmissions and drivelines. Our services cover a wide range of industrial sectors, including passenger cars, commercial-agricultural-construction vehicles, marine gearboxes, and industrial machines. We aim to help our clients' toughest assignments by providing solutions from concept development to final components.
